

Surface Workload Optimization Opportunities with Self-Service BI Reporting and Analytics

Terma Software delivers a visionary Adaptive Intelligence and Predictive Analytics Workload Platform that provides enterprise companies the necessary visualization, adaptability, and intelligence to successfully manage complex workloads.

Terma's Solutions Deliver a Future of Possibility

TermaUNIFY has long provided visibility into anticipated workload processing and associated issues before they happen. Instead of spending costly hours resolving workload issues, users can enjoy peace of mind knowing that issues will be identified in a timely fashion, allowing for preemptive intervention.

Now, Terma can further empower users with the addition of TermaINSIGHT, a self-service BI analytics and reporting platform. End users now have the access and control they need to build and analyze their own reports while incorporating data from diverse sources. Partner predictive analytics with extensive reporting capabilities, all within the Terma platform.

User Empowerment

Our users have diverse informational needs, and now with TermaINSIGHT, each user can self-select and filter the information on their individualized BI reporting and analytics platform

Unprecedented Insight

TermaINSIGHT integrates data from diverse sources into one user-friendly dashboard, making it easier to review, analyze, and identify hidden trends that could be affecting operational efficiency.

General Information to Tailored Content

Match information to user needs with the ability to view reports interactively and sort, filter, and tailor content in whatever way you want.

Opaque to Clear Visibility

Now, users can use data from the TermaANALYTICS repository, import other data sources, and correlate related information with your workload analytics for clear visibility into processing.

Frustration to Satisfaction

TermaINSIGHT equips users with easy-to-use editing features, including Drag and Drop functionality, to make it easy to share findings in sophisticated reports, complete with charts, images, and other visuals.

TermaINSIGHT Empowers Users with Unprecedented Access and Control

The needs of each user is different based on their role and responsibilities within the company. The information required by an application developer will differ from those of an operations manager, and the information should be tailored accordingly.

With TermaINSIGHT, a self-service BI reporting and analytics platform, users can build their own reports and dashboards to find and review the information that is most pertinent to them. Users can access information on desktop or mobile; reports can be scheduled or ad hoc. Information is only a click away and easily shared with our built-in scheduling and distribution capabilities.
